No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1992 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 293

Number 1, February 14, 1992

COMMUNICATION

- Oxidant-Induced Mobilization of Zinc from Metallothionein *Henry Fliss and Michel Ménard* 195

BIOLOGICAL OXIDATIONS, BIOENERGETICS, AND P450 REACTIONS

- Degradation of Cytochrome P450 2E1: Selective Loss after Labilization of the Enzyme
Daniel J. Tierney, Arthur L. Haas, and Dennis R. Koop 9
- Characterization of Ubisemiquinone Radicals in Succinate-Ubiquinone Reductase
Toshiaki Miki, Linda Yu, and Chang-An Yu 61
- Inhibition of Protein Carbonyl Formation and Lipid Peroxidation by Glutathione in Rat Liver Microsomes
Jairam R. Palamanda and James P. Kehrer 103
- Thiol Depletion Induces Lethal Cell Injury in Cultured Cardiomyocytes
Cyrus M. Dhanbhoora and John R. Babson 130
- Cloning and Characterization of a Novel CYP3A1 Allelic Variant: Analysis of CYP3A1 and CYP3A2 Sex-Hormone-Dependent Expression Reveals That the CYP3A2 Gene Is Regulated by Testosterone
Vera Ribeiro and Maria Celeste Lechner 147
- Mechanism of Reaction of a Suggested Superoxide-Dismutase Mimic, Fe(II)-N,N,N',N'-Tetrakis(2-pyridylmethyl)ethylenediamine
Luigi Iuliano, Jens Z. Pedersen, Andrea Ghiselli, Domenico Praticò, Giuseppe Rotilio, and Francesco Violi 153
- Further Characterization of Cytochrome P450 Involved in Phytoalexin Synthesis in Soybean: Cytochrome P450 Cinnamate 4-Hydroxylase and 3,9-Dihydroxypterocarpan 6a-Hydroxylase
Georg Kochs, Daniele Werck-Reichhart, and Hans Grisebach 187

ENZYME STRUCTURE, MECHANISMS, AND REGULATION; CELLULAR REGULATION

- Characterization of an Endopeptidase of *Trypanosoma brucei brucei*
M. J. Kornblatt, G. W. N. Mpimbaza, and J. D. Lonsdale-Eccles 25
- Purification and Properties of Versiconal Cyclase from *Aspergillus parasiticus*
Bor-Kang Lin and John A. Anderson 67
- Depletion of Rat Hepatic Glutathione and Inhibition of Microsomal *trans*-2-Enoyl-CoA Reductase Activity following Administration of a Dec-2-ynol and Dec-2-ynoic Acid
Marmoud N. Nagi, Sanoj K. Suneja, Lynda Cook, and Dominick L. Cinti 71
- Glucose 1,6-Bisphosphate-Overloaded Erythrocytes: A Strategy to Investigate the Metabolic Role of the Bisphosphate in Red Blood Cells
Elena Piatti, Augusto Accorsi, Maria Piera Piacentini, and Antonio Fazi 117
- Butyryl cAMP Enhances the Effect of 1,25-Dihydroxyvitamin D₃ on a Human Promyelocytic Leukemia Cell, HL-60, at Both the Receptor and the Postreceptor Steps
Masaaki Inaba, Senji Okuno, Hidenori Koyama, Yoshiki Nishizawa, and Hirotooshi Morii 181

GLYCOCONJUGATES; PROTEOGLYCANS AND EXTRACELLULAR MATRICES

- Polymerization of Heparin by Complexed Ferrous Ions
Biswajit Lahiri, Pi-Shiang Lai, Manuel Pousada, Douglas Stanton, and Isidore Danishefsky 54
- Interaction between Retinoic Acid and the Transforming Growth Factors- β in Calf Articular Cartilage Organ Cultures
Teresa I. Morales and Anita B. Roberts 79

LIPIDS AND LIPID MEDIATORS

- Characterization and Partial Purification of Squalene-2,3-Oxide Cyclase from *Saccharomyces cerevisiae*
Gianni Balliano, Franca Viola, Maurizio Ceruti, and Luigi Cattel 122

MEMBRANE PROTEINS, TRANSPORT, AND CELL SIGNALING; CYTOKINES AND RECEPTORS

- The Phospholamban Phosphatase Associated with Cardiac Sarcoplasmic Reticulum Is a Type 1 Enzyme
Nancy A. E. Steenaart, John R. Ganim, Joseph Di Salvo, and Evangelia G. Kranias 17
- Parathyroid-Like Regulation of Parathyroid-Hormone-Related Protein Release and Cytoplasmic Calcium in Cytotrophoblast Cells of Human Placenta
Per Hellman, Peter Ridefelt, Claes Juhlin, Göran Åkerström, Jonas Rastad, and Erik Gylfe 174

PLANT BIOCHEMISTRY AND MOLECULAR BIOLOGY

- Identification, Purification, and Characterization of S-Adenosyl-L-methionine: Isoliquiritigenin 2'-O-Methyltransferase from Alfalfa (*Medicago sativa* L.)
Carl A. Maxwell, Robert Edwards, and Richard A. Dixon 158
- Wound-Inducible Pinene Cyclase from Grand Fir: Purification, Characterization, and Renaturation after SDS-PAGE
Efraim Lewinsohn, Mark Gijzen, and Rodney Croteau 167

PROTEIN STRUCTURE AND FUNCTION; PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

- Rat Ceruloplasmin: Resistance to Proteolysis and Kinetic Comparison with Human Ceruloplasmin
Timothy P. Ryan, Thomas A. Grover, and Steven D. Aust 7
- Primary Structure of Thymosin β_{12} , a New Member of the β -Thymosin Family Isolated from Perch Liver
Teresa L. K. Low, David Ta-wei Liu, and Jeng-huei Jou 33
- An Investigation of the Thermal Unfolding of Swine Pepsinogen Using Circular Dichroism
Peter McPhie and Richard I. Shrager 40
- Analysis of Stable Protein Methylation in Cultured Cells
Joseph Najbauer, Brett A. Johnson, and Dana W. Aswad 83
- Removing the Two C-Terminal Residues of Actin Affects the Filament Structure
Séan I. O'Donoghue, Masao Miki, and Cristobal G. dos Remedios 110

TRANSCRIPTIONAL CONTROL; MEMBRANE-NUCLEUS SIGNAL TRANSDUCTION; PROTEIN-DNA INTERACTION

- Undermethylation and DNase I Hypersensitivity of Myeloperoxidase Gene in HL-60 Cells before and after Differentiation
Kazuya Hashinaka and Michiyuki Yamada 4
- Expression and Function of Heterologous Forms of Malate Dehydrogenase in Yeast
Joan S. Steffan, Karyl I. Minard, and Lee McAlister-Henn 93
- Comparison of the Modes of Action of a Vero Toxin (a Shiga-like Toxin) from *Escherichia coli*, of Ricin, and of α -Sarcin
Masayuki Furutani, Keiko Kashiwagi, Kiyoshi Ito, Yaeta Endo, and Kazuei Igarashi 14

Number 2, March 1992

BIOLOGICAL OXIDATIONS, BIOENERGETICS, AND P450 REACTIONS

- Molecular Cloning and Immunological Characterization of Porcine Kidney Ferredoxin
John L. Omdahl, Keith Wilson, Harold Swerdlow, and William J. Driscoll 21
- Baculovirus-Mediated Expression and Functional Characterization of Human NADPH-P450 Oxidoreductase
Shinji Tamura, Kenneth R. Korzekwa, Shioko Kimura, Harry V. Gelboin, and Frank J. Gonzalez 21

- Relationship between the Rate of Reductase-Cytochrome P450 Complex Formation and the Rate of First Electron Transfer
Charles S. Eyer and Wayne L. Backes 231
- The Bacterial Hemoglobin from *Vitreoscilla* Can Support the Aerobic Growth of *Escherichia coli* Lacking Terminal Oxidases
Rajendra P. Dikshit, Kanak L. Dikshit, Yixiang Liu, and Dale A. Webster 241
- Anomalous Effect of Uncouplers on Respiratory Chain-Linked Transhydrogenation in *Escherichia coli* Membranes: Evidence for a Localized Proton Pathway?
David Y. B. Chang, Cynthia Hou, and Philip D. Bragg 246
- Increased NADH-Dependent Production of Reactive Oxygen Intermediates by Microsomes after Chronic Ethanol Consumption: Comparisons with NADPH
Elisa Dicker and Arthur I. Cederbaum 274
- Deferoxamine Inhibition of Cr(V)-Mediated Radical Generation and Deoxyguanine Hydroxylation: ESR and HPLC Evidence
Xianglin Shi, Xiaoya Sun, Peter M. Gannett, and N. S. Dalal 281
- Inhibition of Veratryl Alcohol Oxidase Activity of Lignin Peroxidase H2 by 3-Amino-1,2,4-Triazole
Helfried Tuisel, Thomas A. Grover, John A. Bumpus, and Steven D. Aust 287
- 17 β -Estradiol Hydroxylation Catalyzed by Human Cytochrome P450 1A1: A Comparison of the Activities Induced by 2,3,7,8-Tetrachlorodibenzo-*p*-dioxin in MCF-7 Cells with Those from Heterologous Expression of the cDNA
David C. Spink, Hans-Pietro Eugster, David W. Lincoln II, John D. Schuetz, Erin G. Schuetz, Judith A. Johnson, Laurence S. Kaminsky, and John F. Gierthy 342
- Spin Trapping Study on the Kinetics of Fe²⁺ Autoxidation: Formation of Spin Adducts and Their Destruction by Superoxide
Hiroaki Kosaka, Yasuo Katsuki, and Takeshi Shiga 401

ENZYME STRUCTURE, MECHANISMS, AND REGULATION; CELLULAR REGULATION

- NA Topoisomerase I from Calf Thymus Mitochondria Is Associated with a DNA Binding, Inner Membrane Protein
Jia-Hwei Lin, Gary M. Lazarus, and Frank J. Castora 201
- The Carotenoid Halocynthiaxanthin: A Novel Inhibitor of the Reverse Transcriptases of Human Immunodeficiency Viruses Type 1 and Type 2
Shoshana Loya, Yoel Kashman, and Ammon Hizi 208
- Alanine Synthase: Purification and Allosteric Properties
Margaret M. Matthews, Wei Liao, Kalla L. Kvalnes-Krick, and Thomas W. Traut 254
- Mg NMR Studies of Yeast Enolase and Rabbit Muscle Pyruvate Kinase
Myoung Eun Lee and Thomas Nowak 264
- Regulation of *Crassula argentea* Phosphoenolpyruvate Carboxylase in Relation to Temperature
Thierry P. Chardot and Randolph T. Wedding 292
- Retinoic Acid Can Be Produced from Excentric Cleavage of β -Carotene in Human Intestinal Mucosa
Xiang-Dong Wang, Norman I. Krinsky, Guangwen Tang, and Robert M. Russell 298
- Inhibition and Activation of Porcine Squalene Epoxidase
Mei Bai and Glenn D. Prestwich 305
- Inactivation of Pig Heart NADP-Specific Isocitrate Dehydrogenase by Two Affinity Reagents Is Due to Reaction with a Cysteine Not Essential for Function
Gerald E. Smyth and Roberta F. Colman 356

LIPIDS AND LIPID MEDIATORS

- Microsomal Fatty Acid Synthetase from the Integument of *Blattella Germanica* Synthesizes Methyl-Branched Fatty Acids, Precursors to Hydrocarbon and Contact Sex Pheromone
Patricia Juárez, Jody Chase, and Gary J. Blomquist 333

MEMBRANE PROTEINS, TRANSPORT, AND CELL SIGNALING; CYTOKINES AND RECEPTORS

- Effects of Fluorescein Isothiocyanate on Insulin Actions in Rat Adipocytes
Yoshinori Goto, Yasuhiro Sumida, Jo Ellen Flanagan, Frances W. Robinson, Ian A. Simpson, Samuel W. Cushman, and Tetsuro Kono 224
- Surface-Exposed Proteins of 3T3-L1 Adipocytes: Identification of Phosphorylated, Insulin-Translocated, and Recycling Proteins
James F. Hare and Karyn Taylor 416

PLANT BIOCHEMISTRY AND MOLECULAR BIOLOGY

- Biosynthesis of Rice Phytoalexins: Identification of Putative Diterpene Hydrocarbon Precursors
Karen A. Wickham and Charles A. West 320
- Expression Cloning in *Escherichia coli* and Preparative Isolation of the Reductase Coacting with Chalcone Synthase during the Key Step in the Biosynthesis of Soybean Phytoalexins
Roland Welle and Joachim Schröder 377

PROTEIN STRUCTURE AND FUNCTION; PROTEASES, PROTEIN TURNOVER, AND POST-TRANSLATIONAL PROCESSING

- Binding of Heparin to Basic Fibroblast Growth Factor Induces a Conformational Change
Steven J. Prestrelski, Gary M. Fox, and Tsutomu Arakawa 314
- Evaluation of Human N-Linked Glycosylation Sites in Murine Granulocyte-Macrophage Colony-Stimulating Factor
Scott W. Altmann and Michael B. Prystowsky 349
- Specificity and Mode of Action of the Muscle-Type Protein-Arginine Deiminase
Kohji Nomura 362
- Purification and Characterization of Bovine Interstitial Collagenase and Tissue Inhibitor of Metalloproteinases
Barry D. Sudbeck, John J. Jeffrey, Howard G. Welgus, Robert P. Mecham, David McCourt, and William C. Parks 370
- Relationship between the Catalytic Center and the Primary Degradation Site of Triosephosphate Isomerase: Effects of Active Site Modification and Deamidation
An-Qiang Sun, K. Ümit Yüksel, and Robert W. Gracy 382

TRANSCRIPTIONAL CONTROL; MEMBRANE-NUCLEUS SIGNAL TRANSDUCTION; PROTEIN-DNA INTERACTION

- Prostaglandin Endoperoxide Synthase Gene Structure: Identification of the Transcriptional Start Site and 5'-Flanking Regulatory Sequences
Stacey A. Kraemer, Elizabeth A. Meade, and David L. DeWitt 391
- AUTHOR INDEX FOR VOLUME 293 424

NOTICE

The Subject Index for Volume 293 will appear in the December 1992 issue as part of a cumulative index for the year 1992.

Archives of Biochemistry and Biophysics is an international journal dedicated to the dissemination of fundamental knowledge in all areas of biochemistry and biophysics. **Communications** and **regular manuscripts** that contain new and significant information of general interest to workers in these fields are welcome. Sufficient detail must be included to enable others to repeat the work.

Communications offer a means of early publication of work of such importance that rapid publication is warranted. They should not exceed 15 double-spaced typed manuscript pages in length (including text, bibliography, tables, and figures). To expedite review and processing of communications, authors should send them directly to an Executive Editor most closely associated with the subject category of the communication. Communications sent to the Editorial Offices of the journal (see below) will be assigned to an Executive Editor.

Accelerated status may be given to those manuscripts that are reviewed as outstanding and that require little or no revision. At submission, authors may request accelerated publication of their manuscript. To expedite publication of such articles, authors will not receive proofs.

Manuscripts should be written in clear, concise, and grammatical English and should be submitted in quadruplicate (one original and three photocopies), including four sets of original figures or good quality glossy prints, to:

Archives of Biochemistry and Biophysics

Editorial Office
Seventh Floor
1250 Sixth Avenue
San Diego, California 92101

Failure to receive the required number of copies of the manuscript may delay review. All copies of halftone artwork *must* be glossy prints or originals; photocopies of halftones do not provide sufficient detail to be used for the review process. *In the case of rejected manuscripts only one copy of the manuscript will be returned to the author.*

For nucleotide sequence data authors are encouraged to submit original nucleotide or amino acid sequence data to a database such as GenBank or EMBL. A footnote that includes the accession number should be included on the title page. It is preferable that the sequence data be deposited either prior to submission or by the time of acceptance of the manuscript. However, a footnote can be added at the proof stage if the material is deposited after acceptance. For further information

please contact the editorial office or GenBank or EMBL directly.

Original papers only will be considered. ***Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. It is the responsibility of the corresponding author to obtain the agreement of all the coauthors of the manuscript prior to its submission to the journal.*** Abstracts of oral or poster presentations are not considered to constitute previous publication. Presentation of material in preliminary communications normally will not preclude publication of a full paper in *Archives*, provided that the full paper contains additional information that justifies its publication and does not repeat the presentation of the same data that supported the preliminary communication. The manuscript should be accompanied by copies of all preliminary communications and of all relevant manuscripts that are in press or under editorial consideration by another journal. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Archives* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors should suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process. The corresponding author will receive a decision letter from the Executive Editor. Revised manuscripts and correspondence concerning such manuscripts should be sent to the Executive Editor at the address indicated on the decision letter. Revised manuscripts should be accompanied by a copy of the unrevised version.

Many acceptable papers require minor revision or condensation. It is in the mutual interest of both the authors and the journal that amended manuscripts be returned promptly. A revised paper will retain its original date of receipt only if it is received by the Executive Editor within 2 months of the date of return to the author.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white

¹An extended Instructions to Authors is published in the January issue of *Archives of Biochemistry and Biophysics*. Reports are available from the Editorial Office upon request. Authors should consult the extended Instructions for details of nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

paper, with 1-in. margins on all sides. All pages should be numbered consecutively.

Subject Areas. Authors should specify on page 1 of the manuscript the Subject Area of the article submitted:

Biological Oxidations, Bioenergetics, and P450 Reactions
Glycoconjugates; Proteoglycans and Extracellular Matrices
Lipids and Lipid Mediators

Biophysical Chemistry and X-Ray Crystallography

Membrane Proteins, Transport, and Cell Signaling; Cytokines and Receptors

Enzyme Structure, Mechanisms, and Regulation; Cellular Regulation

Plant Biochemistry and Molecular Biology

Protein Structure and Function; Proteases, Protein Turnover, and Post-Translational Processing

Transcriptional Control; Membrane-Nucleus Signal Transduction; Protein-DNA Interaction

Page 1 should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 65 characters including letters and spaces, the appropriate subject category for listing in the Table of Contents, suggestions for index list entries, and the name, complete mailing address, and telephone and fax numbers of the person to whom correspondence should be sent.

Page 2 should contain a short abstract of 50–250 words.

Editorial style should conform to the *Handbook for Authors* (American Chemical Society).

Footnotes to the text should be identified by superscript Arabic numerals and should be typed double-spaced on a separate sheet; footnotes to tables should be identified by superscript lowercase italic letters (*a*, *b*, etc.) and placed at the bottom of the table.

Tables should be numbered with Roman numerals and cited consecutively in the text. Each table should be titled and typed double-spaced on a separate sheet. Units must be clearly indicated for each of the entries in the table.

Authors can submit complex tables and mathematical material as camera-ready copy. In this way, they are spared multiple, tedious proofreadings and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible and preferably submitted as 5 × 7-in. glossy prints.

Figures should be cited consecutively in the text by Arabic numerals. Legends should be typed double-spaced on a separate sheet. All figures and illustrations are to be submitted in such form as to permit photographic reproduction without retouching or redrawing. They should be planned to fit the proportion of the printed page (7½ × 9 in.; column width, 3.5 in.) and submitted no larger than 8.5 × 11 in. Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. Glossy prints of figures properly prepared are acceptable. Illustrations in color can be accepted only if the authors defray the cost.

References should be cited in the text by an Arabic numeral in parentheses and listed at the end of the paper in numerical order typed double-spaced on a separate sheet. Abbreviation of journal titles should conform to those of *Chemical Abstracts Service Source Index*, 1985. Please note the following examples:

1. Mottley, C., Robinson, R. E., and Mason, R. P. (1991) *Arch. Biochem. Biophys.* **289**, 153–160.
2. Stein, W. D. (1986) *Transport and Diffusion across Cell Membranes*, Academic Press, San Diego.
3. Magnani, J. L., Spitalnik, S. L., and Ginsburg, V. (1987) in *Methods in Enzymology* (Ginsburg, V., Ed.), Vol. 138, pp. 195–207, Academic Press, San Diego.

Miniprint supplements are an effective way of presenting supportive data. They are printed from plates made by photographic reduction from typed pages provided by the author. Types of data that have been published as miniprint supplements include analyses relevant to studies of amino acid or polynucleotide sequences, details of chemical syntheses, preparation of enzymes, extended statistical or mathematical discussions, and X-ray diffraction data. The miniprint supplement is published in the journal, immediately following the parent paper, and is included in the reprints. Since the miniprint supplement is produced from camera-ready copy supplied by the authors with no redaction or editorial changes it is important that the copy be letter perfect and conform to the style of the journal. *Authors will not be permitted to make changes to the miniprint supplement at the proof stage. Any changes necessary in the proof must be made as a typeset "Note added in proof."*

Proofs will be sent to the author, with a reprint order form. Authors will be charged for extensive alterations.

Reprints. Fifty reprints of each article will be provided free of charge. Additional reprints may be purchased.

Personal computer disks. Manuscripts may be submitted to *Archives of Biochemistry and Biophysics* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in these Instructions for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal and the proofs must be read carefully by the author. Discs that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting, conversion and a list of generic codes, please contact the publisher (Associate Director, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone 619 699-6415; fax: 619 699-6800).

Methods

A Companion to Methods in Enzymology

Editors-in-Chief

John N. Abelson

California Institute of Technology, Pasadena

Melvin I. Simon

California Institute of Technology, Pasadena

The articles in the topic-oriented issues comprising this journal present new methods applicable to a number of disciplines. Each issue is devoted to a specific approach or technique and describes its theoretical basis. Emphasis is placed on clear descriptions of protocols which allow applications of these methods in any modern laboratory.

Each issue is organized by a special editor and consists of a set of invited articles. Topics covered in early issues include protein and nucleic acid crystallization, pulsed-field gel electrophoresis, covalent modification of proteins by lipids, polymerase chain reaction, DNA sequencing, two-dimensional gels, new methods for antibody production, cell separation and analysis, new methods in ligand identification, and *in vitro* mutagenesis.

Single issues may be purchased separately for \$30.00 each.
Contact the Publisher for Table of Contents flyers.

Biotechnology and Applied Biochemistry

Editor-in-Chief

P. N. Campbell

Department of Biochemistry and Molecular Biology, University College London
United Kingdom

Regional Editors

J. R. DeLoach

USDA, College Station, Texas

K. Yagi

Institute of Applied Biochemistry, Gifu, Japan

Biotechnology and Applied Biochemistry is concerned with results of fundamental studies directly related to the design of new biotechnology, the improvement of existing biochemical processes, and the preparation, utilization, conversion, or application of biological materials.

The journal encourages the development of the multidisciplinary teams that are vital to the future of biotechnology and publishes articles that demonstrate a role for biochemistry in biotechnology. The journal also features original research, review articles, and commentaries.

Research Areas Include

- Agriculture
- Biotechnology
- Clinical chemistry
- Energy production
- Enzyme technology
- Fermentation technology and microbial processes
- Food and beverage industries
- Medicine
- Pharmaceutical industry
